PROFESSIONAL EXPERIENCE

Lockheed Martin – Cybersecurity Systems Engineer Intern

05/26 - Present

- Implemented DoD STIG requirements as mandated by DODI 8500.01
- Supported cybersecurity systems engineering activities for a major defense program in accordance with DoD requirements
- Applied Risk Management Framework principles to support security control implementation, compliance documentation, and assessment activities
- Used Nessus & SecurityCenter to assess system configurations & identify findings against applicable DISA STIG requirements
- Applied system patches and updates through remote administration techniques on RHEL systems
- Participated in an authorized penetration-testing CT&E assessment event supporting system security validation

Rowan University Information Resources and Technology - Security Analyst Team Lead

10/2023 – 09/2026

- Led third-party cybersecurity risk management activities across university vendor lifecycle, including onboarding assessments, continuous monitoring, and secure offboarding
- Assessed vendors handling FERPA, HIPAA, PCI DSS, GDPR, PII, and confidential data for security, privacy, and compliance
- Reviewed SOC 2 reports, documentation, and control evidence to assess security posture and guide governance decisions
- Participated in executive-level cybersecurity tabletop exercises assessing incident-response readiness and decision-making

TECHNOLOGIES

Security: Nessus, Splunk, DISA STIGs, RMF, ServiceNow GRC, OneTrust, SOC 2 Analysis

Systems: RHEL, Ubuntu Server, Windows, Raspberry Pi OS, macOS, Ansible, GitHub/GitLab

Networking: TCP/IP, IPv4 Subnetting, DNS, DHCP, NAT, Firewalls, WireGuard, SSH, NGINX, Cloudflare

Scripting: Bash, Python, Java

EDUCATION

Rowan University — B.S. in Computer Science — GPA: 3.4/4.0

09/2023 – 12/2026

– **M.S. Cybersecurity**

Expected December 2027

– **Relevant Coursework:** Network Security, UNIX/Linux Systems, Software Engineering, Data Structures and Algorithms

– **Certifications:** CompTIA Security+, CySA+, Linux+

PROJECTS

Secure Multi-Node Homelab and Network Infrastructure

- Designed and administered a multi-node homelab using Ubuntu Server, Raspberry Pi devices, Docker, NGINX, Cloudflare, and WireGuard
- Built a self-managed network with a dedicated router and switch, configuring IPv4 subnetting, static addressing, DHCP, NAT, and port forwarding
- Implemented granular firewall policies, WireGuard VPN access, SSH key authentication, and restricted management interfaces
- Configured Cloudflare DNS and NGINX reverse proxies to securely route multiple subdomains to internal services
- Created Bash scripts and cron jobs to automate service recovery, container restarts, system reboots, health checks, and routine maintenance
- Deployed centralized monitoring with Uptime Kuma and Netdata to track server availability, containers, CPU, memory, storage, network connectivity, and critical services

Automated Linux Backup and Recovery System

- Developed a Restic-based backup solution using encrypted, deduplicated snapshots to protect Linux configuration, application data, scripts, and critical files
- Developed Bash scripts to collect system-state data, installed-package inventories, configuration files, and service information needed for disaster recovery
- Scheduled backups to dedicated external storage, configured retention policies, and resolved permission issues affecting protected system files
